

Powering Through Together

## Prysmian MKM Supports National Energy Reduction Efforts

Hungary is currently facing a significant energy challenge, and the government has asked major energy consumers to reduce their electricity usage during peak hours.

At Prysmian, we believe that **responsibility** extends beyond our business operations.

As a company deeply rooted in the communities we serve, we acted immediately on the government's request, implementing measures to reduce energy consumption across our operations.

**At the same time, our commitment to customers remains unchanged.** Through careful planning and operational adjustments, we continue to **maintain reliable operations, ensure business continuity, and honour confirmed delivery dates.** While supporting the national effort to reduce energy demand, we remain focused on providing the high level of service and responsiveness our customers expect.

Sustainability has long been part of our strategy. Through investments in renewable energy, including solar parks at our Kistelek and Balassagyarmat facilities, we contribute to a more resilient energy system and are well positioned to respond to the current challenge.

We recognise that moments like these require **collective action**.

## Join our efforts!

We can all contribute to reducing energy demand, both at work and at home. Here are a few simple ways to help:

- Switch off lights and devices when not in use
- Unplug chargers and electronics on standby
- Limit air conditioning use and keep temperatures moderate
- Run washing machines and dishwashers only with full loads
- Avoid using high-energy appliances during peak hours where possible
- Keep blinds and curtains closed during the hottest part of the day

**During times of challenge, responsibility matters. Together, small actions can make a meaningful difference.**
